The Five Year BS/MS Program
Computer Science Department

The computer science department has created an option for undergraduates who plan to obtain a master’s degree after completing their bachelor’s degree. Under this plan, students can complete their combined bachelor’s/master’s degrees in five years, less than is normally required by students who work in two uncoordinated programs. In addition, students can be admitted into the graduate program during their junior year, thus avoiding uncertainty about whether they will indeed qualify for a master’s program at the end of their undergraduate studies.

There are several advantages to a master’s degree:

- Broader and deeper understanding of computer science
- Augmented research experience and ability
- Possible entry into doctoral studies
- Higher salaries
- Qualifications for certain kinds of jobs, especially teaching at the junior or four-year college level

Good students qualifying for advanced standing, who have at least a 3.0 GPA, and are within 30 credits of completion can apply for the program. They need to formally apply, including submitting an application to the School of Graduate Studies, obtain three letters of recommendation, and take the Graduate Record General Examination (GRE). If their qualifications are satisfactory, students can be admitted to the MS program, pending completion of the bachelor’s degree. During the senior year they should:

1. File split forms for up to nine credits of the 5000-level-or-above computer science courses taken while an undergraduate to be recorded on the graduate transcript.

2. Even though these appear on the graduate transcript, the BS will not be awarded until these courses have been completed as if for a regular BS.

3. If necessary, take enough electives to make up for the credit hours lost in step 1 from the undergraduate transcript so that the total number of credits on the undergraduate transcript is 120.

Students complete the remaining requirements for the master’s program while matriculating as a graduate student.
